

Course Project Instructions and Reading

In this project you will be reading a genomic data science paper and answering some questions to help you learn about how the different fields in genomic data science work together and to evaluate your understanding of some of the concepts we have learned throughout the course.

The paper we are reading is called: "Microbial Genes in the Human Genome: Lateral Transfer or Gene Loss?" You can access the paper from the Science Magazine site here: <http://www.sciencemag.org/content/292/5523/1903.full>. You'll need to register for a free Science account to access the full text.

If you aren't able to do that, then you can also access the via this link:

[Salzberg et al. 2001](#)

You may also find the annotated version of the manuscript helpful for the project.
